DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: **48a**. It is noted that reference character **48c** in the drawings appears to be directed to the "inlet ports" which are described in the specification and should be replaced with reference character **48a**. Correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Luthi (4,297,794). Luthi discloses a drying cylinder for through-air processing of paper sheets which comprises: a plurality of conduits having channels extending radially (**30** and **38**) and longitudinally (**32** and **39**) within said drying cylinder; means **14** for drawing air through said conduits; said conduits having inlet port means (**40** and **42**) for distributing air flow into longitudinal chambers; said conduits having outlet port means **34** for distributing air flow out of said longitudinal chambers; and means **24**

Art Unit: 3749

for dividing said conduits between the outlet port means and the inlet port means (See Figures 1 and 2 and Column 3 lines 11-22).

Allowable Subject Matter

4. Claims 2-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Iwase et al (5,775,002), Chuang et al. (4,556,450) and McCarthy (4,523,390) disclose drying cylinders or an exhaust hood system for a drying cylinder.
